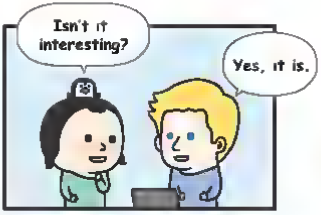
A child's ability and intelligence is not fixed and they can improve it by themselves
through effort so it is best not to give a child a fixed idea about their intelligence



I thought it would be useful for Mev too so I told him about it

The group that were praised for their effort got a better score compared to the first test's result.

And the other group got a worse score.

Test1

First, they gove students o test
to solve with eosy questions.

Next, for the third test,
they gave all of the students
a difficult test.

The group that were praised on their effort
enjoyed the test and worked really hard.
Some of them actually solved the problems.

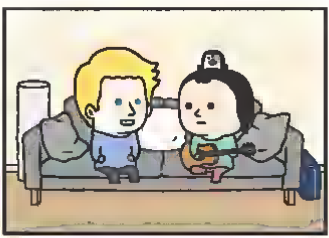
Do it right
as I taught you_

LINE Webtoon

A good way to proise

While I was surfing online,
I read about a good way to praise.

There was an experiment.



My desire to fight increased by 30%.

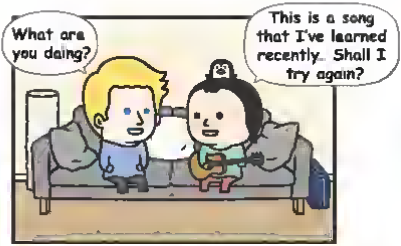
However, the group that were praised because of their intelligence were dissapointed and got upset by the test.

Test4

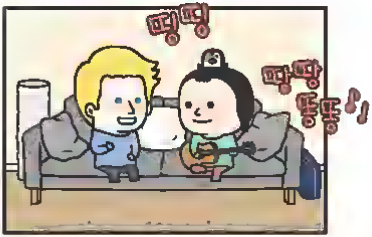
Finally, they gave the students a test which was at the same level as the first test.

So, the kids who were praised about their intelligence didn't want to make others dissapointed and didn't want to risk failure.

Test3



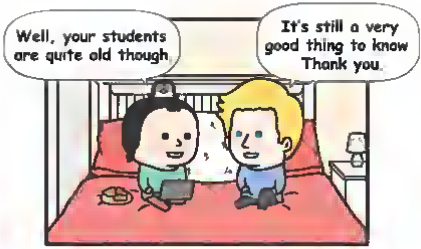
(Ding ding dong dong dang dang)



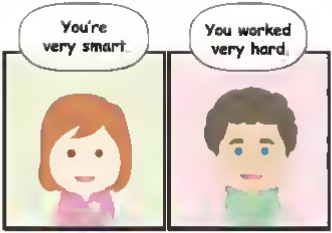
Secondly, they gove the some students o choice between two different tests, one was easy and the other was difficult.

And most of the kids who were praised about their intelligence chose the easy test.

Then 90% of the kids who were praised about their effort chose the difficult test.



That evening



And they praised the kids in two different ways.

Test2
